Self motivated fullstack software developer with 3+ years of experience building web applications in logistics, ecommerce, and marketing spaces committed to having a positive impact on team culture.

Experience

Freelance Developer - Remote   February 2023 — Present

Develop web solutions for businesses and individuals to support marketing and promotion efforts, in some cases creating designs and establishing a web presence all the way from square one.

Blackbird

Software Engineer - Remote   March 2021 — September 2022

Wrote and maintained software solutions across the stack, comprised of Angular frontend applications, Ruby and PHP APIs, and MySQL and ElasticSearch data sources.

- Delivered code every day on a team that practiced CI/CD, deploying changes to production daily which contributed to a shorter feedback loop in an Agile setting

- Deployed a Vue application that enabled clients and potential leads to create their own purchase orders, producing warm leads for our sales team and streamlining requests for existing clients

- Migrated and refactored business logic in Rails and legacy custom PHP APIs to standard Laravel endpoints, cutting down on technical debt and enabling faster, safer feature development and bugfixing

- Implemented administrative features in our delivery dispatch Angular application enabling our logistics team to stay compliant with the rapidly evolving requirements of a highly regulated industry

- Wrote a feature to aggregate and display product ratings on our Angular menu applications, providing greater insight to shoppers. These menus processed over $1 million a month in retail sales

- Championed and executed the overhaul of UI and endpoints of the internal administration application to optimize our staff's daily workflow, and ultimately reduce time required for client onboarding

- Helped mentor and onboard a new engineering hire

Web Developer - Remote   June 2019 — March 2021

Took on responsibilities outside of my job description and increasingly made contributions to the company's SaaS codebase, earning promotion to Software Engineer.

- Maintained and wrote fullstack features for several WordPress marketing websites to support marketing initiatives, interfacing directly with marketing and design teams

Operations Dispatcher - Reno, NV   August 2017 — June 2019

Self-taught and learned web development technologies, earning promotion to Web Developer. Managed delivery staff, routed retail and wholesale deliveries for customers and clients.
